Admit Date: **7/15/2024** Discharge Date: **7/15/2024**
DOB / Age: **6/16/1997 / 28 years** Gender: **Male**
Patient Loc: **200 Cardiac Clinic**
Attending MD: **KHALED SULEIMAN AL NAJASHI -9102633 PSCC**

Medical Report

DOCUMENT NAME: Medical Report
SERVICE DATE/TIME: 8/6/2025 16:18 AST
RESULT STATUS: Auth (Verified)
PERFORM INFORMATION: AKRAM MUSA MOHAMEDALI (8/6/2025 16:30 AST)
SIGN INFORMATION: KHALED SULEIMAN AL NAJASHI -9102633 PSCC
(8/7/2025 06:44 AST); AKRAM MUSA MOHAMEDALI
(8/6/2025 16:30 AST)

Present Complaints:

NOT FEELING WELL
HAD MULTIPLE COMPLAIN NON SPECIFIC

Brief History:

28 years old male patient case of:
-Tetralogy of Fallot.
- Status post Tetralogy of Fallot repair in Prince Sultan Cardiac Center in 1999.
- Status post pulmonary valve replacement in Qassim in 2013.
- History of ventricular tachycardia.
- Impaired right ventricle function.

MOHAMMED is a 28 years old male, known to have the above mentioned cardiac diagnosis and procerures , he is on regular follow up in the clinic
Last time seen on 15/7/2024

Constitutional: [No fevers, chills, sweats]
Eye: [No recent visual problems]
ENMT: [No ear pain, nasal congestion, sore throat]
Respiratory: [No shortness of breath, cough]
Cardiovascular: [No Chest pain, palpitations, syncope]
Gastrointestinal: [No nausea, vomiting, diarrhea]
Genitourinary: [No hematuria]

Allergies

No Known Allergies

Examination:

Physical Exam

Vitals & Measurements

T: 36 °C (Oral) HR: 73(Peripheral) RR: 20 BP: 127/75 SpO2: 97% WT: 75 kg

Investigations:

ECG: SR 60/min

Report ID: 10120533

Printed by: **Meshal Saad Alshehri** Print Date/Time: **8/10/2025 10:18 AST**

Medical Report

Echo:

1. Left ventricle: The cavity size is normal. Systolic function is at the lower limits of normal. The estimated ejection fraction is 50%.
2. Right ventricle: The cavity size is severely increased. Systolic function is moderately reduced. The RVSP is 45 mm Hg.
3. Pulmonic valve: A bioprosthetic valve is present. There is moderate regurgitation. The peak systolic gradient is 16 mmHg.
4. Tricuspid valve: There is severe regurgitation.

Holter:

BASIC RHYTHM WAS SINUS.

Ventricular ectopic activity consisted of 1049 beats, of which, 8 were in couplets, 945 were in single PVCs, 74 were in interpolated PVCs, 19 were single VEs, 3 were in bigeminy.

The patient's rhythm included 12 sec of sinus tachycardia. The single episode of sinus tachycardia occurred at 19:09:45, lasting 12 sec, with maximum heart rate of 130 BPM.

Supraventricular ectopic activity consisted of 730 beats, of which, 8 were in atrial couplets, 26 were late beats, 687 were single PACs, 9 were in trigeminy. The longest R-R interval was 1.8 seconds occurring at 16:22:03. The longest N-N interval was 1.8 seconds occurring at 16:22:03

Exercise: 12 minutes, Bruce, 80% of target HR

Medications

Inpatient

No active inpatient medications

Home

empagliflozin 10 mg oral tablet, 10 mg= 1 tabs, Oral, every morning
Entresto (Valsartan+ Sacubitril / 49mg-51mg) 100mg Tab, 200 mg, Oral, BID
eplerenone, 25 mg, Oral, Daily
metoprolol, 50 mg, Oral, BD

Diagnosis:

Tetralogy of Fallot.

- Status post Tetralogy of Fallot repair in Prince Sultan Cardiac Center in 1999.
- Status post pulmonary valve replacement in Qassim in 2013.
- History of ventricular tachycardia.
- Impaired right ventricle function.

Management:

Patient on regular follow up in the clinic

Continue home medication

To be seen in the next clinic after 9 months

Recommendations:

APPOINTMENT AFTER 6 MONTHS IN PREADMISSION CLINIC

9 MONTHS OPD

CONTINUE SAME MEDICATIONS

NEED GI ND ENT FOLLOW UP
